A.D. 1895

*Date of Application, 9th May, 1895*

*Complete Specification Left, 7th Feb., 1896—Accepted, 7th Mar., 1896*

PROVISIONAL SPECIFICATION.

Improved Fishing Reel or Winch.

I, CHARLES EDWARD CUMMINS of 63 Haymarket London S.W. Fishing-Tackle Manufacturer do hereby declare the nature of this invention to be as follows :—

The object of this invention is to provide a simple apparatus for regulating the speed of fishing reels. It consists of a round plate of any suitable material fixed on the end of the spindle of the reel, just clear of and outside the back plate of the reel. This plate, revolving as the line runs off the reel, can be kept in check by pressure of the hand on it. Drawings of this invention will be supplied with the Complete Specification.

10 Dated this 8th day of May 1895.

CHARLES EDWARD CUMMINS.

COMPLETE SPECIFICATION.

Improved Fishing Reel or Winch.

I CHARLES EDWARD CUMMINS of 63 Haymarket, London, in the County of Middlesex Fishing Tackle Manufacturer do hereby declare the nature of this invention and in what manner the same is to be performed, to be particularly described and ascertained in and by the following statement :—

This invention relates to a new and useful improvement in fishing reels in the nature of an attachment or addition to the ordinary forms of reels and is designed to facilitate the control the user should have over the speed at which it revolves, when a line is thrown out from the reel.

For this purpose the axis of the reel is made longer, so as to project through the bearing on the opposite side of the reel to the handle, and on this projection is fixed a plate of ebonite or other suitable material of about the same diameter as the reel.

This plate will necessarily revolve with the reel itself and the user may control the speed by pressing his fingers against the plate.

In the drawings accompanying this Specification

Fig. 1 shows the complete reel with the plate "A," as already described, attached to the axis of the reel by the screw "B."

Fig. 2 is a sectional view of the reel but with the plate detached.

"A" is the plate, "F" axis of reel, "E" is a hole in the centre of the plate to pass on to the axis "F," and is held by the screw "B" which screws into the hole "C." The projection "D" keeps the plate clear of the side of the reel.

[ Price 8d. ]

---

*Cummins's Improved Fishing Reel or Winch.*

---

Having now particularly described and ascertained the nature of my said invention, and in what manner the same is to be performed, I declare that what I claim is:—

The arrangement of a plate affixed to a fishing reel in the manner herein described for the purpose of enabling the user of the reel to control the speed at which it revolves by pressing the fingers against the said plate.

Dated this 3rd day of February 1896.

CHARLES EDWARD CUMMINS.
